

## **Position for Undergraduate Students**

The Oluwadare Lab led by Oluwatosin Oluwadare Ph.D. is looking for highly motivated and hardworking undergraduate students who wish to work on exciting research problems that are both computationally challenging and biologically important. We are focused on the application of deep learning and machine learning algorithms to solve interesting and important biological problems. We develop new computational tools and efficient algorithms that makes use of biological experimental data to address complex biological questions. Students will have an opportunity to work on those aspects of this research that they find most interesting.

Students can choose to work for a semester or longer for research credit, or to join the group as research assistants for a couple of months in the summer. Students with an interest in algorithms are especially encouraged to apply. A background in biology is not required.

Please contact Dr. Oluwadare at [ooluwada@uccs.edu](mailto:ooluwada@uccs.edu) if you are interested in pursuing this opportunity.
